

What businesses like yours are already doing with AI

Prepared by Alaska AI for Camp Denali · July 2026

Every example in this brief is real. We fetched each source page and checked the numbers against it before anything went in. Where a claim did not hold up on the page it was cut, and one widely repeated hiring statistic was cut for exactly that reason.

We also grade each item by who is making the claim. A named case means a real business put its name and its numbers on the record. Vendor claimed means the software company published the figure, and vendor numbers are best-case selections, so read them as a ceiling rather than an average. Industry reported means a trade publication covered it. We say which is which on every card.

Nothing here is a promise about Camp Denali. It is a picture of what is already working at other small hospitality operations, so you can see the whole field and judge for yourselves. Under each example we add a line on what the same play would look like at a 19 cabin fly in lodge run by a 5 person year round crew.

How to read the grades

NAMED CASE

 a named business, on the record

VENDOR CLAIMED

 the software company's own figure

INDUSTRY REPORTED

 trade press coverage

Guest communication and after hours coverage

The biggest cluster in the field. Small teams drowning in the same trip questions, answered by software that drafts and a human who signs.

AI webchat and guest messaging at a family owned heritage resort

NAMED CASE

WHO RUNS IT

Trapp Family Lodge in Stowe Vermont. 96 rooms, still owned by von Trapp descendants, using Canary Technologies.

WHAT HAPPENED

Call volume fell 30 percent. Around 500 messages a week are handled by the system. Response time went from 9 minutes to under 30 seconds. Monica Daubenspeck, their Revenue and Reservations Manager, is quoted on the record.

SOURCE

canarytechnologies.com/customers/trapp-family-lodge

AT CAMP DENALI

This is the closest analog in the set. A storied family owned resort with a personal touch brand cut its phone load by nearly a third without losing warmth. For your office that means the routine trip questions get a drafted answer in seconds and your crew reads and sends every one.

AI booking assistant for outdoor and wilderness hospitality

NAMED CASE

WHO RUNS IT

AutoCamp, the US outdoor hospitality group with locations at Yosemite and Zion and other parks, using HiJiffy.

WHAT HAPPENED

\$1.63 million in direct bookings attributed to the assistant. An 88 percent automation rate. More than 10,000 call center hours saved between January 2021 and September 2024.

SOURCE

hijiffy.com/success-stories/autocamp

AT CAMP DENALI

National park adjacent hospitality carries your exact question load. Weather windows, access, packing, what the rate includes. Your flight weights and the 25 pound soft luggage rule are the kind of answers a system like this repeats perfectly every time.

AI answering booking inquiries on email and messaging

NAMED CASE

WHO RUNS IT

ATKV Resorts, a group of seven nature destination resorts in South Africa, using Asksuite.

WHAT HAPPENED

\$150,000 in new business in 9 months against an \$8,000 investment.

SOURCE

asksuite.com/blog/atkv-resorts-success-case

AT CAMP DENALI

Your inquiries come from the Lower 48 and overseas, often written while your office is closed. After hours coverage means a guest gets a useful first reply overnight and your team confirms in the morning.

AI guest messaging killing the repeat question load

NAMED CASE

WHO RUNS IT

Holiday Inn Express and Suites at Orlando's SeaWorld, under GM Mason Caracciolo, using Canary.

WHAT HAPPENED

82 percent of guest communication automated within 4 months. \$1,700 a month in incremental upsell revenue. Service scores up 3 to 5 points.

SOURCE

canarytechnologies.com/customers/holiday-inn-express-suites-at-orlandos-seaworld

AT CAMP DENALI

A franchise property is a different culture from yours, and we include it for the mechanic, not the brand. The mechanic is simple. Stop typing the same answer 52 times a season and spend that time on the guests standing in front of you.

AI reads inbound booking email and drafts the itinerary work

NAMED CASE

WHO RUNS IT

Across Australia, a destination management company in the Goway Group, using TourConnect AI. GM Kathy Turner is quoted on the record.

WHAT HAPPENED

The majority of manual booking data entry was eliminated. Consultants stay on every reply and nothing goes out without a human.

SOURCE

tourconnect.ai/resources/case-study-across-australia-amp-itinerary-assist-ai

AT CAMP DENALI

This is the closest proven pattern to your correspondence spine. Your reservations team secures flights, collects party weights, and shepherds every booking by email. Software that structures the inbound message and drafts the reply, with a person sending every one, fits that spine exactly.

AI guest communication at small independent scenic properties

VENDOR CLAIMED

WHO RUNS IT

Entourage sur le Lac in Quebec and Lake District Hotels, a family run group in the UK, both listed in HiJiffy's success index.

WHAT HAPPENED

Entourage reports 94 percent of inquiries automated and 440 staff hours saved. Lake District reports a 70 percent reduction in inquiry calls. Both figures are published by the vendor, so treat them as best case.

SOURCE

hijiffy.com/success-stories

AT CAMP DENALI

These two match your size and ownership shape better than anything else on the list. Independent, scenic destination, small team. Even at half the claimed numbers the hours returned to a 5 person crew would be real.

AI voice answering front desk phones

INDUSTRY REPORTED

WHO RUNS IT

Deployments under Marriott, Wyndham, and Choice flags, per Hotel Dive trade reporting.

WHAT HAPPENED

Canary claims 40 percent of front desk calls go unanswered industry wide. The press coverage is candid that the technology is early and depends heavily on integration.

SOURCE

hoteldive.com/news/hotel-tech-ai-voice-front-desk-calls/740672

AT CAMP DENALI

This is the category our flagship proposal lives in, so we owe you the honest framing. Real deployments exist and the technology is the least mature play on this list. That is exactly why it would start as an after hours safety net, never a replacement for the voice guests know.

Reputation

Review responses in the owner's voice, drafted by software, edited and signed by a person.

AI review response in the house voice

NAMED CASE

WHO RUNS IT

Edwardian Hotels London, using MARA, published on Hospitality Net.

WHAT HAPPENED

Around 50,000 reviews answered over two years at a near 100 percent response rate. Per review time went from 5 to 7 minutes down to seconds. A human edits every draft before it posts.

SOURCE

hospitalitynet.org/casestudy/4123659

AT CAMP DENALI

At your rates every public reply carries weight. An owner voice response to every review, drafted for you and signed by you, is a small standing habit that software makes cheap to keep.

AI review replies for a small multi brand operator

NAMED CASE

WHO RUNS IT

DQuadrat Living GmbH in Germany, using MARA.

WHAT HAPPENED

Monthly review response time fell from 33 hours to 6, a 79 percent cut, worth roughly 1,100 euros a month in staff time.

SOURCE

mara-solutions.com/post/mara-success-story-dquadrat-living-time-saving-with-ai-review-replies

AT CAMP DENALI

This is reputation work at tiny team scale, which is your scale. The hours saved are modest in absolute terms and they come out of the same five people who do everything else, which is what makes them matter.

Revenue and pricing

The most crowded corner of the field, and the one where our advice for you diverges from what peers are doing. Each pricing card says so plainly.

In conversation timed offers

NAMED CASE

WHO RUNS IT

The LINE SF, a 236 room San Francisco hotel, using Canary.

WHAT HAPPENED

Offers timed by AI inside the guest conversation convert 4 times better than blasted links, and drive 65 percent of early check in revenue.

SOURCE

canarytechnologies.com/customers/the-line-sf

AT CAMP DENALI

Your all inclusive rate rules out the classic upsell menu, and that is fine. The pattern that transfers is timing. The right moment to mention an extra night or next season's dates is inside the conversation a guest already started, not in a broadcast.

Automated dynamic pricing for very small independents

VENDOR CLAIMED

WHO RUNS IT

567 small hotels and guesthouses on RoomPriceGenie AutoPilot, aggregated by the vendor.

WHAT HAPPENED

Average revenue up 19 percent, average daily rate up 4 percent, occupancy up 14 percent, with gains reported as independent of property size. This is the vendor's own aggregate of its own customers.

SOURCE

roompricegenie.com/the-real-impact-of-revenue-management-insights-from-567-hotels-using-roompricegenie

OUR HONEST NOTE

We do not recommend algorithmic pricing for Camp Denali. Your fixed published rates are part of the brand, and guests who plan a year ahead trust a number that holds. This item is here so you see the whole field honestly, not because we propose it.

Dynamic pricing for a family run rental operator

NAMED CASE

WHO RUNS IT

O'Neal Vacation Rentals, 37 properties, owner Shane O'Neal, using PriceLabs.

WHAT HAPPENED

Revenue up 60 percent on some of their houses, which is their own qualifier and we keep it. Daily pricing work cut by roughly 90 percent.

SOURCE

hello.pricelabs.co/customer-story/oneal-vacation-rentals-increased-their-revenue-with-pricelabs-dynamic-pricing

OUR HONEST NOTE

Same recommendation as above. We would not put an algorithm on your rates. What this case does prove at owner operator scale is that software beats gut feel on scarce inventory, a lesson worth keeping even where the pricing tool itself is wrong for you.

Revenue management at a 33 room five star boutique

NAMED CASE

WHO RUNS IT

Heure Bleue Palais in Essaouira Morocco, using Duetto. GM Eric Molle is quoted on the record.

WHAT HAPPENED

Average daily rate up 37 percent. Revenue per available room up 115 percent. Occupancy up 29 percent year over year.

SOURCE

duettocloud.com/library/how-boutique-independent-hotels-drive-revenue-with-dynamic-pricing

OUR HONEST NOTE

At 33 keys against your 19 cabins this is the nearest scale match in the whole set, and the numbers are striking. Our advice still stands. Your published rate is a promise your guests plan around, and we would not trade that for algorithmic pricing. Included so you see what premium boutiques your size are doing.

Seasonal hiring

Rebuilding a crew every spring is its own repeat question load.

Conversational AI for high volume seasonal hospitality hiring

NAMED CASE

WHO RUNS IT

Great Wolf Lodge, the Great Wolf Resorts group, using Paradox and its assistant Emma.

WHAT HAPPENED

\$700,000 saved on job advertising in 2024. About 90 percent of the hiring process automated. Scheduled interviews up 423 percent, with show rates up to 75 percent. A time to hire figure circulating elsewhere does not appear on the source page, so we exclude it.

SOURCE

paradox.ai/case-studies/great-wolf-lodge

AT CAMP DENALI

You rebuild a roughly 30 person seasonal crew every spring on a 5 person core, which is the same mechanic at lodge scale. Screening questions, scheduling, and applicant follow up are the parts software absorbs while your people still make every hire. With 2027 applications opening in November this is a play with a natural start date.

Back office and seasonal paperwork

The unglamorous wins. Paper that piles up in a compressed season.

Invoice and document automation at a seasonal peak small business

NAMED CASE

WHO RUNS IT

Tavezio, formerly H&H Purchasing, a Florida business serving schools and summer camps, using Zenphi.

WHAT HAPPENED

Invoice throughput up 6 times. More than \$85,000 saved in a single 3 month seasonal peak. Nine planned temp hires eliminated.

SOURCE

zenphi.com/case-study-invoice-processing-automation

AT CAMP DENALI

A business whose whole problem is a compressed season is your shape exactly. Vendor invoices, provisioning paperwork, and flight manifests all spike in the same 14 weeks your crew is busiest. Software that reads and files the paper gives those weeks back.

Staff knowledge

An assistant that answers only from the company's own documents.

An assistant answering staff questions from the company's own handbook

VENDOR CLAIMED

WHO RUNS IT

hotelkit Knowledge AI. The platform's customers include Radisson Hotel Group, Ruby Group, and The Mandala, though no customer is named for this specific feature.

WHAT HAPPENED

The feature is live across a large named customer base. There is no verified feature specific metric yet, and we will not invent one.

SOURCE

hotelkit.net/products/knowledge-ai

AT CAMP DENALI

This is the camp operations brain pattern. Your manuals, your trail notes, your kitchen and generator procedures, answered instantly for a brand new seasonal hire in June. It answers only from your own documents and it can be built independently of any vendor.

The pattern underneath all of it

Read across every verified case above and one shape repeats. A small team keeps its voice while software absorbs the repetitive load. The Trapp family still sounds like the Trapp family. Kathy Turner's consultants still send every reply. Edwardian's managers still sign every review response. The machine drafts, sorts, schedules, and suggests, and a human signs everything that reaches a guest. That is the only version of this we would ever put in front of Camp Denali, because the voice you have kept for 75 years is the asset, and the software exists to protect the time that voice needs.
